ABOUT THE COMPANY

JARMEX GRUP

P.P.H.U. JARMEX Jarosław Jaskólski

JARMEX sp. z o. o. sp. k.

JARMEX TRANS sp. z o. o. sp. k.

P.P.H.U. JARMEX Jarosław Jaskólski has been established in 1994. It is a private company based in 100% on the owner's capital. On October 1st 2016 the company underwent restructuring. It has been divided into companies which deal respectively with production and services in terms of the metal industry – JARMEX sp. z o. o. sp. k. as well as transport – JARMEX TRANS sp. z o. o. sp. k. Today we are a family company managed by Jarosław Jaskólski and his sons: Michał and Tomasz.

The Group currently employs more than 180 people in all branches of its business (production, transport-shipping, trade, and services). Each month the production plant processes more than 1000 tons of steel which we use to make various products. We possess the ISO 9001:2015 quality management certificate which guarantees the quality of offered products.

PRODUCTION

WELDED MESHES

The Jarmex company is famous for producing various types of welded meshes for more than 25 years now. We prepare the meshes from $\varnothing 8$ to $\varnothing 8$ mm wires and at mesh sizes from 20 mm to 150 mm. The maximum size of the finished mesh is 2500 x 4000 mm.

FENCES

We offer ready fencing modules for self assembly. The offered products are available in various designs and colors. Thanks to self-assembly the client receives a product at a very reasonable price as well as the satisfaction resulting from personally setting up the fence. Jarmex offers also an assembly service provided by partner companies.

GABION DECORATIVE FENCES

In 2012 we've introduced an interesting product to the market – gabion fences. The offered products create an interesting arrangement, which in a modern and interesting way will decorates your garden

TRANSPORT AND SHIPPING

The beginning of transport at the Jarmex company reaches as far back as 1994. For the first ten years of its activity the company owned just a few vehicles, of various brands, used for own purposes. Due to establishing the State Shipping in 1998 the fleet began to be used to provide transport services. In 2006 we've made a decision to develop our shipping business over European countries and to unify the fleet. We've decided to purchase Renault cars. For the semitrailers we've chosen the Kögel and Wielton brands which are highly valued by the industry. Currently we possess more than 60 trucks with semitrailers (own and employed carriers). They are mostly ecologic trucks meeting the Euro 5 and 6 emission norms. We plan to purchase following sets in the near future. Caring for their proper use and technical condition, in 2015 we've built a service hall and washing station. We've provided the facilities with high quality equipment.

The main production of the "JARMEX" company consists in many types of welded meshes for various applications. We manufacture meshes in different sizes, mesh sizes, and wire diameters, in accordance with the client's needs. We also manufacture various elements for metal containers (locks, mandrels, pressed, drilled, turned elements, etc).

SQUARE MESHES

Example dimensions: 20 x 20 mm, 25 x 25 mm, 30 x 30 mm, and their multiplicity. There is the possibility to order other mesh dimensions.

RECTANGLE MESHES

At the length of L 2500 mm the dimensions of the meshes are at: 20 mm, 25 mm, 30 mm, and their multiplicity, at the length of L 4000 mm the dimensions of the meshes start at 20 mm.

The mesh dimensions are provided in an axial manner.

FENCING SYSTEMS

PPS SYSTEM

We advise using PPS panels for private houses, companies, as well as sports and commercial facilities. The easiness of assembly, regardless of the ground level, is ensured by the connecting elements which quantity is determined by the height of the fence. The fence set includes posts with caps, panels, and fittings. The wire gauge, size of meshes, and mesh inflections ensure the stiffness and durability of the finished fence. The system includes available: posts, a door, double leaf gate, and self-supporting gate.

DOUBLE LEAF GATE MOTOR

3 years of warranty for the correct functioning between temperatures from -20° to $+50^{\circ}\text{C}$. A 100% Italian product, a complete set with the CE marking: actuator x 2, central unit in a waterproof case, an LED lamp with an antenna, anti-crushing photocells x 2, and a double-channel remote – ensures safe work. All moving elements and components are made from the highest quality, Teflon-free, metal materials. The motor includes mechanical limit switches and does not require to additionally block the leaves. The movement is executed with the use of a worm screw – does not suck moisture into the engine, completely self-breaking. An automatic closing function.

Gate opening speed	25 sec.
Gate leaf	to 600 kg
Max. lenght of leaf	to 3 m.
Power	230V
Max. opening angle	110°
Possibility of declutching	YES

SELF-SUPPORTING GATE MOTOR

The LIVI 6NET set

A set for self-supporting gates of up to 600 kg. Includes: an electric geared motor with a base, lamp with an antenna, 1 set of photocells, 2 double-channel remotes, and a NET230N central unit.

The LIVI 9NET set

A set for self-supporting gates of up to 900 kg. Includes: an electric geared motor with a base, lamp with an antenna, 1 set of photocells, 2 double-channel remotes, and a NET230N central unit.

DEA®

- The possibility to program many remotes.
- The possibility to program with a home intercom.
- The possibility to communicate with a cell phone.

GARAGE DOORS

We are a manufacturer of the highest quality garage doors. Our doors constitute a premiere product manufactured with great passion. All components from which the doors are made come from our Italian partner and meet even the most rigorous norms concerning safety, air permeability, and water penetration. There is the possibility of automation and selecting a custom color.

ADVANTAGES

- Made in Poland.
- Safe doors – double protection against falling and an additional roller protection.
- 3 years of warranty.
- Sectional panel – thickness 40 mm, perforation warranty 5 years.
- An automation of the Italian DEA company included in the product's price.
- The set includes 2 remotes.
- High quality components.
- Easy assembly.
- All connecting elements necessary to assemble the doors included in the set.
- Lintel height at only 180 mm.
- High packing quality, protecting against damages during transport.
- Available for immediate delivery.
- The possibility to deliver directly to the client.

GARAGE DOOR MOTOR

TEO JARMEX set

Automation for sectional and tilt garage doors.

TEO JARMEX constitutes a new motor for sectional and tilt garage doors at 24 V. It is a solution which is economic and easy to assemble.

TEO automation includes a central control unit with a built-in 433 MHz radio receiver. The engine's case includes buttons which allow to easily program it without the need to remove the cover.

- A steel busbar with a chain, guaranteeing maximum durability.
- The length of the busbar at 3300 mm, maximum door opening up to 2300 -2400 mm.
- Built-in lighting.
- Engine including an encoder – used for automatic position detection.
- An anti-crushing sensor.
- Automatic speed and slowing down regulation when opening and closing.
- The possibility to program the automation with products by other producers.
- At the client's wish there is the possibility to purchase a device for emergency external unlocking.

TRANSPORT AND SHIPPING

The shipping staff consists of specialists with many years of experience in the transport trade, working in teams of experienced, skilled, and ambitious people.

All shipping-transporting operations are subject to protection on the base of the Carrier's Liability Insurance in terms of national, international and cabotage transport.

The ISO 9001:2015 quality management certificate, the Reliable Company certificate, and the Certificate of a Reliable Carrier issued by the TRANS Road Transport Platform, all guarantee the quality of the services offered by us. The company takes advantage of a GPS Vehicle Monitoring System which allows for real-time information concerning executing orders and shipment locations.

SERVICING TRUCKS

SCOPE OF SERVICES

1. Technical services.

- Oil exchange.
- Exchanging oil, air, power steering, Ad-blue, and other filters.
- Lubrication.
- Regulating.

2. Current repairs.

3. Computer diagnostics.

4. Selling and exchanging spare parts.

Offer directed to all truck and semitrailer brands and types, as well as delivery vehicles.
